Backend Developer

PROJECTS

Chirpy — *HTTP Server*
https://github.com/junaidmd0980/chripy

- Built a Twitter-style REST API server in Go, handling user accounts, posts and authentication.
- Stored data in PostgreSQL with SQL migrations and type-safe queries.
- Structured handlers, middleware and config so new endpoints are easy to add.

Technologies: Go, PostgreSQL, goose (migration tool) , sqlc (type-safe queries)

Gator — *Blog Aggregator CLI*
https://github.com/junaidmd0980/Gator

- Developed a command-line RSS aggregator in Go that follows feeds, fetches posts and shows them in the terminal.
- Used PostgreSQL to store users, feeds and posts, with a multi-user command system.
- Optimized API performance and reduced external network latency by caching frequently requested data.

Technologies: Go, PostgreSQL, goose, sqlc

AI Agent — *Coding Assistant*
https://github.com/junaidmd0980/AI-agent

- Built a command-line coding agent in Python that reads, writes and runs code through LLM tool calls.
- Added limits on the working directory so the agent can only touch files it is allowed to.

Technologies: Python, Open Router for API

Student DB — *Attendance Manager*
https://github.com/junaidmd0980/Student-DB

- Created a React attendance app with custom UI components, filtering, and lab-session management.
- Developed a secure backend featuring JWT authentication and OTP-verified email workflows to protect and authorize all API routes.
- Used state-driven pages so lists and filters update instantly without reloads.

Technologies: JavaScript (Node.js / Express), MongoDB, React, SCSS

SKILLS

- Go, Python, JavaScript (Node), C
- PostgreSQL, SQLite, MongoDB, Git, Docker
- HTML/CSS, React
- AWS S3

EDUCATION

Sri Vasavi Institute of Engineering & Technology

June 2025 - June 2029

B.Tech, Computer Science and Engineering

- Last updated on **9 Nov 2026**
